Part D

Cake Store

The store website will display cakes on sale on the store. The user/customer will be able to order a cake they want. Their order will be submitted to the database and shows in the back end, and in the order_history page.

Once they placed an order, they will receive an email confirmation with an estimate make time. Once the cake is ready for pick-up, they will receive another email to notify that the cake is ready for pick-up.
